DETAILED ACTION

1. This communication is responsive to Amendment filed 01/25/2008 and 05/02/2008.
2. Claims 43-81 are pending in this application. Claims 43, 55, and 69 are independent claims. This Office Action is made non-final after a RCE filed 05/02/2008.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 43-81 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 43-81 cite a device, medium and system for performing polynomial operation in accordance with a mathematical algorithm. However, claims 43-81 merely disclose series mental steps/components for performing polynomial operation without disclosing a practical/physical application. Therefore, claims 43-81 are directed to non-statutory subject matter.

Response to Arguments

5. Applicant's arguments filed 01/25/2008 have been fully considered but they are not persuasive.

- a. The applicant argues in pages 10-11 for claims rejected under 35 U.S.C. 101 that the claims are directed to the practical application of a "programmable CPU multiplier"

as cited in the claimed invention. Further, the result is stored in a register. Thus, claims are not only disclose a practical application but also produce a useful and tangible result.

The examiner respectfully submits that the final result is just a result of mathematical polynomial operations of the input data. In addition, the programmable CPU multiplier in the preamble is not sufficient to define the practical application as required in the rejection since nothing in the body of claims would support the programmable CPU. Steps or operations within the body of the claims are merely mathematical operations to perform polynomial operation.
